

Power Platform – PowerApps for Power User 1 Day with Lab

WorkshopPLUS

Duration: 1 Day [Remote / Onsite]

Difficulty Level: 200 - Intermediate

Description

This workshop will provide you with the knowledge and experience you need to use PowerApps as an enterprise service for Power Users to connect, create, innovate, and share business apps with your team on any device in minutes.

Objectives

After participating in this workshop, you will:

- Have a basic understanding of the tools you use to build PowerApps
- Understand the Administrator role, and build PowerApps using Connections, Screens, and Controls
- Understand formula and data types in PowerApps
- Know how to work with external data sources, data stored in SharePoint Online, and profile data in PowerApps
- Be able to use AI in PowerApps with the AI builder and know AI models (Optional)

Outcomes

- Unlock new business agility by using “No Code/Low Code” solutions that connect to many forms of data and display in a simple application without IT help, but in an IT-managed environment.

Methodology

Learn by example

You will learn key principles and concepts about PowerApps by participating in group discussions and from presentations and demonstrations.

Hands-on

You will participate in labs that demonstrate the concepts of PowerApps in practice.

Scope

This offering is scoped to include a basic introduction to Power Platform PowerApps only.

Agenda

Day 1

- Introduction to PowerApps
- Designing with Connectors, Screens, and IDE
- Building with Fields and Formulas
- Implementing through Visual Designs

Delivery Outline

Requirements

Participants

PowerApps Power Users
